

Practical No 4:

Program Title 1: Write a shell script using if then else structure to prompt user to enter name of directory to be created. Check if directory is already present. If directory is present display the message that "directory with name <directory name > is already present. If directory is not present, then display the message that "new directory is created"

Program Title 2: Write a shell script to develop a game using case statement. Generate set of 5 random numbers between 1 to 50. Prompt the user to guess the number (5 chances will be given to user at a time). User will be awarded with 1st price if he/she successfully guess the number correctly in 1st attempt, User will be awarded with 2nd price if guess the number correctly in 2nd attempt and so on. If user does not guess the number correctly in 5 attempts prompt the message "Better luck next time"
